

ABSTRACT

The present invention, in various embodiments, includes novel system and method to design and construct natural stone facade and flooring. In one embodiment, natural stones products are individually characterized and positioned based on design requirements for construction at the project site. In another embodiment, characterized natural stones are preassembled in modular units prior to shipment to the project site. In another embodiment, characterized natural stone products are preassembled in modular units to effect desired designs, textures or patterns at any project site.
